GLIMAKRA
OF SWEDEN

Glimakra of Sweden has developed a unique product for modern work places. Sabine is an effective storage furniture system that is sound absorbing, sound reducing and room dividing. The pressed felt shells on the outside of the furniture interacts with the slotted body in a way that creates a smooth and good sound absorption in a wide frequency range. The acoustic solutions are optimized to create a product that has similar properties, regardless of the furniture's content.

The need is well defined. Open floor plans in general and activity based workplaces in particular, needs to be supplemented with specific products to achieve a functional room acoustic environment.

Sabine is a number of independent storage furniture that also can be connected into elements that are complemented by work tables.

Please take attention on the results of the sound measurements, we were actually self surprised.

For more information, please contact Head of Sales and Marketing, Göran Karlsson, +46 44 454 17. More information is also available on www.glimakra.com.
