Limbus Bulletin

Noticeboard

Design: Team Glimakra

Limbus Bulletin is a high quality noticeboard, made to be combined with Limbus wall absorbents and Limbus write boards. Bulletin is produced from renewable raw materials. The combination of oxidized linseed oil, rosin, cork gives it flexibility and resilience. These qualities result in a product with exceptional durability and an ideal material for noticeboards. The strong, durable, resilient properties of Limbus Bulletin, prevent crumbling and loss of grip often associated with traditional noticeboard materials, such as cork or soft board. Holes after staples and needles also close again after they have been pulled out, and thus the board retains its fresh appearance for a very long time.

DIMENSIONS

Also available vertical.

Other dimensions on request.

Thickness: 53 mm

Weight: 12,5 kg / m²
